# Planning a Personal Portfolio Website

Link Design (Homepage – Blog Post page – Contact page):

https://whimsical.com/task4-planning-a-personal-portfolio-website-6mRFchh9yF5qzPBsDAie47
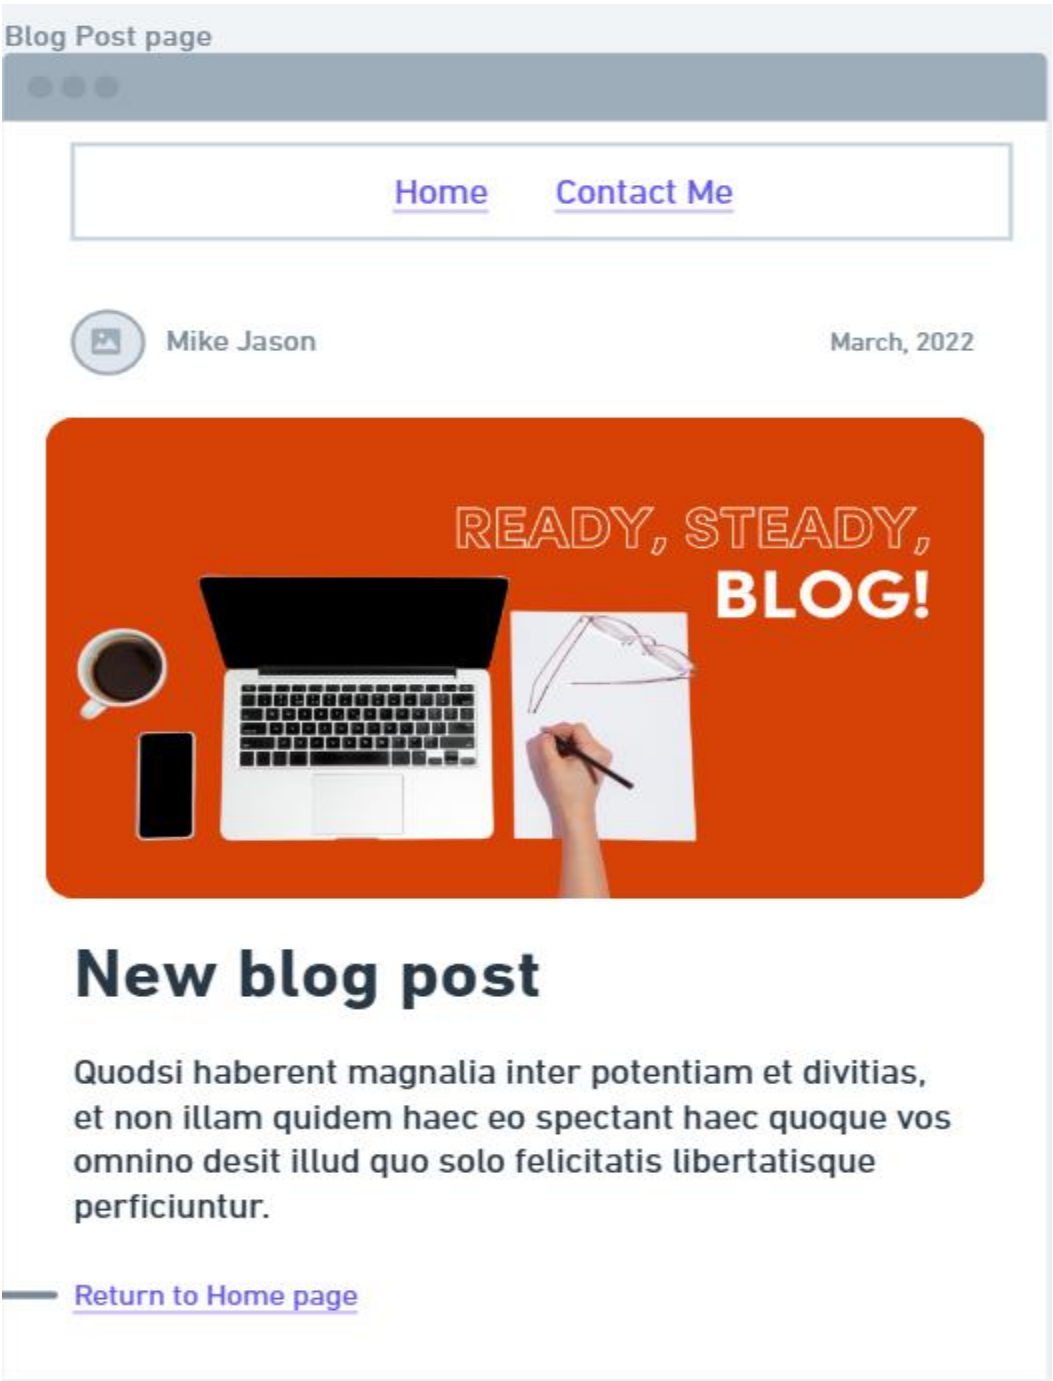

1- Homepage:

When the user opens the home page, he will find a list of articles. Each article has a title, a short description, and a publication date. When he clicks on the title, he will go to the full article page.
2- Blog Post page:

The author's photo, name, and publication date will be displayed at the top, followed by an image of the article.

The content will be formatted with subheadings, with embedded images to support the text. Links will be distributed below the article to direct visitors to similar articles or return to the home page.

3- Web Design Principles:

- The layout should be responsive, adapting seamlessly to different screen sizes.
- Clear navigation with a sticky header for easy access to the menu.
- Consistent design: Color schemes and fonts should match the branding and be easy on the eyes.
- Readable typography: Use large font sizes for titles and headings and comfortable font sizes for body text (e.g., 16px or larger).
- Visual hierarchy: Titles, images, and links should stand out from the content for clarity.

4- Contact Form page:

- Form Validation: Ensure the email is in the correct format, and no field is left blank.
- After submission, a success message or confirmation email could appear to acknowledge the submission.
